DBCOIL IL – Damper Shaft Update

Rev01 – 7/2/19 – Sam A

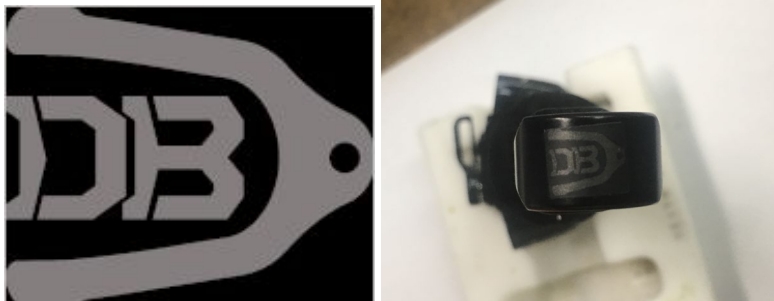

File location: \\Bluetail\Engineering\Technical Service Bulletins

File Name: TSB032

Revision	Description	Author	Date
01	First Release	SamA	7/2/19

Overview

On June 17th 2019 Cane Creek started 100% production of DBCOIL IL rear shocks with a solid damper shaft. This provides additional strength for fitment on clevis mount bikes and other bikes that inflict side loading onto a rear shock. Due to the same exterior shape and finish on the solid shafts compared to the hollow shafts, Cane Creek is now applying this sticker to the end eye of each COIL IL as well as on the box of a new COIL IL to differentiate the new solid shafts inside the shock:

These stickers will be sent with all of the new solid shaft assemblies and are to be applied to the end eye of the shock during a solid shaft installation at the service center.

Scope

Below are the specific dates when solid shaft COIL IL production began based on shock length.

Solid Shaft Part Number	Shock Size	First Production Date
AAD1710	190mm	5/20/2019
AAD1711	200mm	5/7/2019
AAD1712	210mm and 216mm	6/17/2019
